

OUR PEOPLE – Dam Buster’s Amazing Team

Russell Kirkwood, our co-founder is the original Idea’s Man who is an innovator at heart. Russell is a very knowledgeable forensic plumbing investigator who also happens to have enormous insurance industry and compliance experience gained at the coal face of flooded building insurance claims and subsequent litigation. Russell’s pragmatic approach and real-world experience keeps things real with our technical team and production experts.

David Pockett, our co-founder and Managing Director with decades of Loss Adjusting and insurance claims experience behind him, has a methodical nature and astuteness which most lawyers would be jealous of. A very strong believer in Dam Buster and the potential of its products to make an incredible difference for everyone by simplifying compliance and preventing water damage, David is invaluable for management and legal matters, and often perceives things in a manner which others can’t.

Rowan Gregory, our Technical Manager, has been instrumental in the development of Dam Buster’s very simple design philosophy, which is now a straightforward selection method based on design flow rates only. Rowan has also developed our compliance strategy along with all our technical documentation and worked very closely with both Dr Robert Keller and our patent attorneys at WRAYS.

Richard Kingston, Melbourne’s leading Forensic Engineer, worked closely with Russell and David during their Loss Assessing and insurance years. Richard has actively assisted with product development including testing, and continues to assist the team with his methodical, highly detailed and logical approach to problem solving and technical issues.

Adjunct Associate Professor Dr Robert Keller, who is necessarily and fully independent of Dam Buster, is a world leading expert in open channel flow drainage. With decades of incredible expertise, Robert (or Bob as he prefers to be called) has been of invaluable assistance to the development and testing of the world-first Dam Buster products.

Justin Cosgriff, Sheet Metal Design consultant, has been the link between our innovations and the cutting edge of fabrication. Justin has not only prepared all the fabrication drawings for our products, his in-depth knowledge and extensive experience within the sheet metal world has helped to determine the most efficient and cost-effective means of bringing our products to life.

Robert Cross, WRAYS, took over as Dam Buster’s principal Patent Attorney after early work on the rainhead, and has made an invaluable contribution to Dam Buster because of his expertise in the formidable world of Intellectual Property.

Jenny McEwen, WRAYS, a Trademark Attorney with enormous experience, has been of great assistance to Dam Buster, and through her hard work has enabled the Dam Buster trade mark to be registered in key markets internationally.
